Cybersecurity Awareness Training

Prevent phishing attacks on the frontline of your cyber defenses: your people.

How do you safeguard your employees from social engineering attacks?

Regardless of the domain you operate in or the sophistication of your cybersecurity infrastructure, the human element invariably presents a vulnerability. The frequency of social engineering tactics, be it through phishing emails, deceptive text messages, or voice scams, is escalating. Modern attackers are diversifying, leveraging platforms like SharePoint and OneDrive to execute their ploys. Merely spotting the Secure Socket Layer (SSL) isn't an assurance of a site's legitimacy anymore. The terrain of threats is dynamic, demanding adaptive and vigilant measures.

SubRosa's Cybersecurity Awareness Training Services

SubRosa's Cybersecurity Awareness Training service zeroes in on the frontline of defense against escalating cyber threats: your employees. In this evolving digital landscape, safeguarding your organizational assets necessitates an informed and vigilant workforce. Recognizing the distinctiveness of each enterprise, our tailored training methodology encompasses simulated phishing exercises relevant to your team's daily interactions. By collaborating with your in-house experts and key decision-makers, we ensure the educational content precisely aligns with the current awareness levels, competencies, and behavioral patterns of your staff, cultivating a proactive cybersecurity culture.

SubRosa's Differentiators

- Our preliminary phishing simulations, designed uniquely for your organization's workforce, systems, and technology, enable us to assess the proficiency of your employees in tackling cyber threats and the efficacy of your current security protocols.

- Our former military and government training consultants have years of experience dealing with cyber threats on the frontline.

- Ongoing security training and testing ensures that your staff are always engaged in cybersecurity, not just on an annualized basis.

Cybersecurity Awareness Training

Learning Management System

Deliver and track all cybersecurity awareness training with our one-stop training Learning Management System.

Bespoke Training Programs

Hone your resources' skills with custom-made training programs for topic or system-specific security training.

Testing and Validation Exercises

We use social engineering tests to validate that training has been conducted effectively. Remedial training can be implemented where needed.
