# MANAGED DETECTION AND RESPONSE

## In today's constantly evolving security environment, how can businesses monitor their environments and manage incidents?

The enterprise security perimeter has been effectively dissolved, with nearly 50 billion connected devices in the world, 99% of which are susceptible to cybersecurity attacks. Data breaches are increasing at an alarming rate, especially because organizations are challenged to maintain a strong security posture as a result of limited resources.

In this environment, businesses will inevitably awaken to the reality of the need for managing detection and incident response.

Integrating a solution like SubRosa's Managed Detection and Response will quickly and continuously monitor a company's systems 24/7 in an effort to discover breaches in real-time. Relying on the expertise of our team of experts, businesses can prioritize and respond to security incidents of all kinds, including zero-day attacks.

By gaining an unparalleled ability to gauge who is attacking your network, SubRosa can conduct around-the-clock monitoring, reducing false positives and offering a cost-effective solution for at-risk businesses.
